Engineering Trust: Security, Privacy, and AI at Scale in the Age
of Agentic Systems

OCTOBER 15, 2026 · TORONTO, CANADA

About Toronto Tech Summit 2026

Toronto Tech Summit 2026 is an executive summit bringing together Canada's technology, cybersecurity, AI, privacy, risk, and governance leaders for one focused day of conversations that matter.

The summit convenes executives, practitioners, policymakers, researchers, founders, and enterprise builders to address the challenges organizations are actively navigating in AI governance, cybersecurity, digital trust, and responsible AI deployment.

The program follows a single-stream format across eleven curated keynotes, panels, and fireside chats, culminating in TTS Open, a live enterprise AI build competition where winning teams unveil production-ready solutions on the main stage. An Advisory Council of enterprise and academic leaders helps shape the agenda and programming.

Not another expo booth. A seat at the table.

Sponsoring Toronto Tech Summit 2026 gives your organization direct access to the enterprise leaders shaping AI governance, cybersecurity, privacy, technology risk, and digital transformation across Canada. Every sponsorship is designed for meaningful visibility, executive engagement, and thought leadership.

01 Direct access to enterprise decision-makers

Connect with CISOs, CIOs, CDOs, technology executives, risk leaders, legal and compliance executives, and AI decision-makers from organizations leading enterprise transformation.

02 Every attendee experiences every sponsor

Our single-stream format keeps every attendee in the same room throughout the day, ensuring consistent sponsor visibility across the full summit experience.

03 Content aligned with enterprise priorities

Position your brand within conversations focused on AI governance, cybersecurity, privacy, resilience, digital trust, and responsible AI adoption.

04 Executive stage presence

Gold sponsors receive integrated participation through a keynote, panel, fireside discussion, or featured session. Silver sponsors may be considered for speaking participation based on program availability.

Who's in the room and how the conversation extends beyond it

Toronto Tech Summit is intentionally curated for relevance, influence, and executive participation.

Enterprise decision-makers

CISOs, CIOs, CDOs, technology executives, risk and compliance leaders, and digital transformation leaders responsible for enterprise technology strategy.

Policymakers and academic leaders

Leaders contributing to Canada's evolving AI governance, cybersecurity, and digital trust ecosystem through industry and academic collaboration.

Practitioners and builders

Security architects, AI engineers, platform leaders, governance specialists, and TTS Open competitors building enterprise AI solutions.

Executive speakers

Senior leaders delivering keynote presentations, panels, and fireside conversations throughout the summit.

WHERE THE CONVERSATION TRAVELS

- Executive leadership teams and governance committees.
- Enterprise technology and security organizations.
- Professional networks of keynote speakers and panelists.
- Academic and research communities connected through the Advisory Council.
- The growing TTS Open builder community documenting solutions before, during, and after the competition.

TTS Open

A live 72-hour enterprise AI build competition focused on operational challenges organizations are actively solving in 2026. Teams build production-ready solutions designed for enterprise deployment, governance, and security.

TRACK A

Agentic AI Containment - Defining and Enforcing the Blast Radius

Teams design guardrails including permission boundaries, action scoping, audit trails, human oversight, and kill switches that enable organizations to deploy autonomous AI within clearly defined governance boundaries.

TRACK B

Enterprise-Deployable AI Governance - Closing the Shadow AI Gap

Teams build discovery, monitoring, and governance capabilities that improve enterprise visibility into AI usage without disrupting existing business workflows.

WHY TTS OPEN MATTERS TO SPONSORS

Innovation scouting

Gain early visibility into enterprise-ready AI solutions addressing governance, cybersecurity, and AI risk challenges.

Talent access

Connect directly with builders developing practical AI governance and security solutions.

Build-in-public visibility

TTS Open creates real-time technical content as teams document and showcase their work throughout the competition.

Two flagship conversations anchor the summit agenda.

Agentic AI - Who Is Accountable When the Model Acts?

Exploring governance, accountability, operational responsibility, and enterprise trust as AI systems gain greater autonomy.

ALIGNED WITH
TRACK A

Cyber Resilience in the Age of AI-Powered Attacks

Examining how organizations defend enterprise environments against AI-enabled threats across increasingly complex attack surfaces.

ALIGNED WITH
TRACK B

Gold sponsorship includes executive speaking or panel participation. Silver sponsorship opportunities are available based on program capacity.
